

Phase 9: Reports & Dashboards

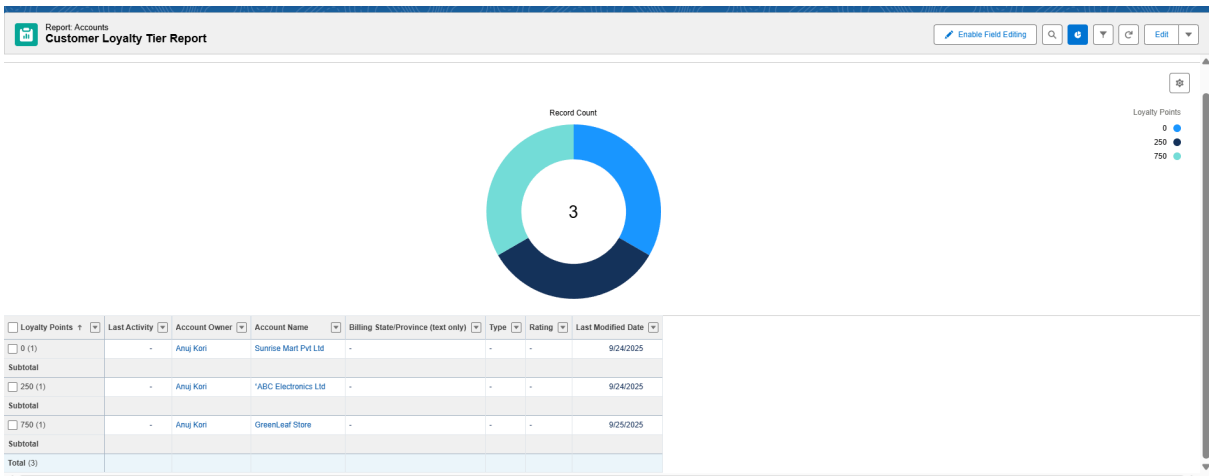

Phase 9 focused on Business Intelligence for SmartShop, giving managers real-time visibility into loyalty, sales, and inventory through curated Reports and a role-friendly Dashboard.

9.1 Reports

Reports were built to answer core operational questions: Who are the most engaged customers, which products are top sellers, where are stock risks, and how are channels performing.

9.1.1 Customer Loyalty Tier Report

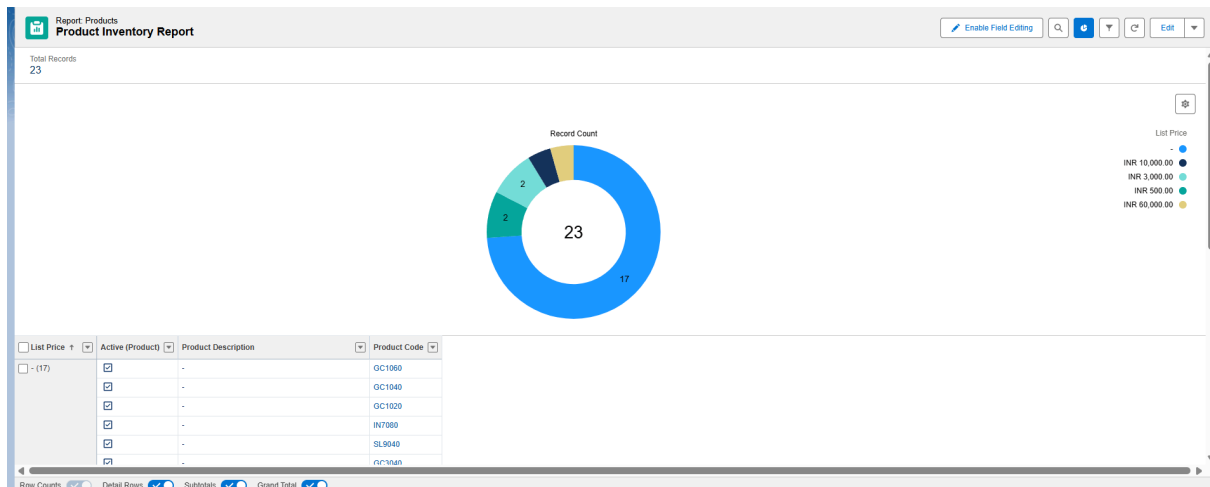

- Objective: Show distribution of customers across loyalty tiers for targeted engagement.
- Data source: Account.
- Key fields: Account Name, Loyalty_Tier__c (Bronze/Silver/Gold), Loyalty_Points__c.
- Grouping: By Loyalty_Tier__c.
- Business impact: Surfaces high-value segments (Gold), highlights upsell opportunities for Silver, and identifies at-risk Bronze cohorts for retention campaigns.

9.1.2 Product Inventory Report

- Objective: Provide a current view of stock on hand and low-stock risks.
- Data source: Product2.

- Key fields: Product Name, ProductCode, Category__c, Stock_Quantity__c, Low_Stock_Alert_Level__c.
- Business impact: Enables proactive replenishment and informs purchasing; supports low-stock monitoring and operational planning.

9.1.3 Orders by Channel Report

- Objective: Compare performance across In-Store vs Online.
- Data source: Order.
- Key fields: Channel__c, Status, Line_Net_Total__c (sum).
- Filters: Status = Activated (finalized sales).
- Grouping: By Channel__c; optional time grouping by Effective Date (Calendar Month).
- Business impact: Guides staffing, promotion mix, and inventory allocation by channel.

9.1.4 Low stock summary report

- Objective: Spotlight products currently below threshold for immediate action.
- Report type: Summary report with filter.
- Data source: Product2.
- Filter: Stock_Quantity__c < Low_Stock_Alert_Level__c.
- Key fields: Product Name, ProductCode, Category__c, Stock_Quantity__c, Low_Stock_Alert_Level__c.
- Grouping: Group by Category__c; show count of low-stock items per category and a grand total.
- Business impact: Centralizes replenishment list for managers; aligns with low-stock alerts configured in automation.

9.2 Dashboards

Dashboards translated reports into visual KPIs for rapid, manager-friendly decision-making. A SmartShop Manager Dashboard consolidates loyalty, sales, inventory, channel mix, and voucher insights.

9.2.1 SmartShop Manager Dashboard

- Objective: Single-screen health check of customer engagement, product sales, channel performance, and stock risks.
- Components:
 - Customer Tier Distribution
 - Source: Customer Loyalty Tier Report.
 - Purpose: Visual share of Bronze/Silver/Gold cohorts for instant segmentation cues.
 - Low-Stock Products
 - Source: Product Inventory Report.
 - Purpose: Live list of items below thresholds for immediate replenishment action.

- Orders by Channel
 - Source: Orders by Channel Report.
 - Purpose: Compare Activated sales split between In-Store and Online.
- Activated Orders
 - Source: Orders by Channel (time-grouped variant).
 - Purpose: Trend of finalized sales over time for seasonality and momentum tracking.
- Design features:
 - Dashboard filters: Date range, Channel__c, and Category__c for quick scope changes.
 - Refresh cadence: Components set to refresh to keep data current for daily stand-ups.
 - Drill-downs: Interactive links from each chart to its source report for deep dives.
 - Target audience: Assigned to Manager profile Home so KPIs are visible on login.

9.2.2 Benefits of the dashboard

- Centralized view: All core KPIs in one place reduces navigation and speeds decisions.

- Visual clarity: Charts make trends obvious and drive faster action on stock and sales.
- Operational impact: Managers identify low stock and weak products early and steer promotions.
- Customer insight: Loyalty visuals inform targeted campaigns and tier-based benefits.

9.3 Summary of Reports & Dashboards

SmartShop's reporting layer delivers actionable intelligence: managers monitor loyalty distribution, track revenue by product, keep inventory healthy, understand channel mix, and measure voucher performance, all rolled up into a single dashboard that supports fast, data-driven decisions.
