

Phase 3 (SmartShop CRM)

Phase 3.1: Standard & Custom Objects

This phase designs the SmartShop CRM data architecture. Standard Salesforce objects handle core CRM and transaction needs, while a small set of custom objects supports loyalty and vouchers. Objects function as tables to store, organize, and relate business data.

Standard vs. Custom Objects

- Standard Objects: Account, Contact, Product2, Pricebook2 , Order, are used for customers, pricing, and sales transactions.
- Custom Objects: SmartShop adds Loyalty_Transaction__c .

Standard Objects

The screenshot shows the Salesforce Object Manager interface for the 'Price Book' object. The breadcrumb trail at the top reads 'SETUP > OBJECT MANAGER'. The page title is 'Price Book'. On the left, a sidebar menu lists various configuration options: Details (selected), Fields & Relationships, Page Layouts, Lightning Record Pages, Compact Layouts, Field Sets, Object Limits, Record Types, Search Layouts, List View Button Layout, Object Access, Triggers, and Validation Rules. The main content area is titled 'Details' and contains several sections: 'Description' (empty), 'API Name' (Pricebook2), 'Custom' (empty), 'Singular Label' (Price Book), 'Plural Label' (Price Books), 'Enable Reports' (empty), 'Track Activities' (empty), 'Track Field History' (empty), 'Deployment Status' (empty), 'Help Settings' (empty), and 'Standard salesforce.com Help Window' (empty).

Custom Objects Designed for SmartShop CRM

Loyalty_Transaction__c

- Purpose: Ledger of loyalty activity (earn/redeem/correction) for each customer.
- Outcome: Transparent, auditable points history and easy rollups for balances.

Note: SmartShop intentionally uses Orders/OrderItems instead of a custom Purchase object to leverage native lifecycle, pricing, and reporting.

Phase 3.2: Field Dictionary

Account (customer entity)

- Ext_Code__c (Text, External ID): Stable integration/import key.
- Loyalty_Tier__c (Formula/Text): Bronze/Silver/Gold determined by points.
- Loyalty_Points__c (Roll-Up/Formula via ledger): Sum of Loyalty_Transaction__c Points__c.

Phase 3.3: Data Modeling & Relationships

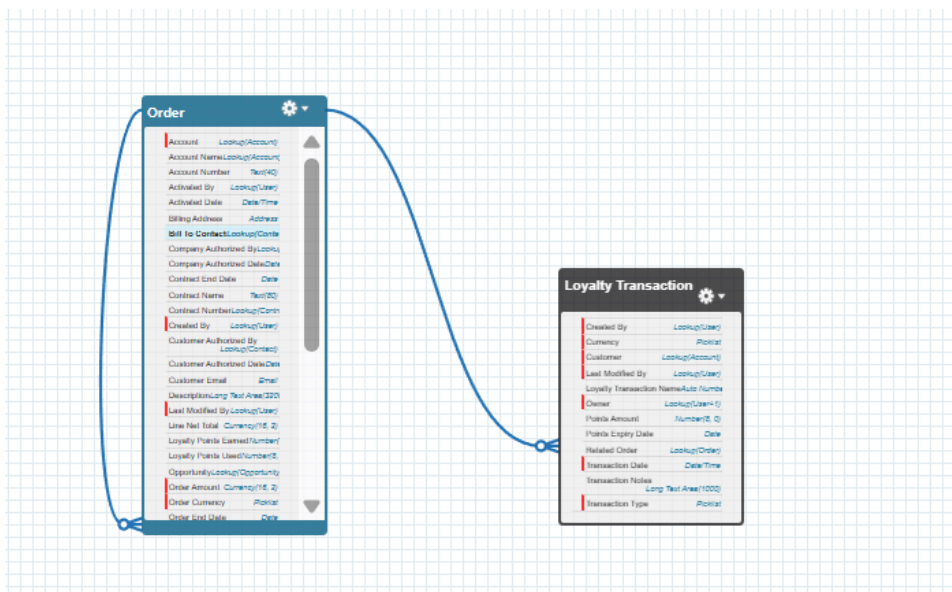

Master-Detail (enforced ownership and lifecycle)

- Loyalty_Transaction__c → Account: Every ledger entry belongs to one Account.

Lookup (flexible, optional references)

- Loyalty_Transaction__c → Order: Optional link to the source order.

Why standard Orders

- Native Draft → Activated lifecycle, “Add Products” flow, and governed pricing via Price Books.
- Cleaner reports, simpler dashboards, and alignment with platform best practices.

Model benefits

- Prevents orphan data for loyalty and vouchers via Account parentage.
- Enables precise rollups (loyalty balances, order totals) and security inheritance.
- Delivers a 360° customer view tying Accounts to Orders, Loyalty, and Vouchers, with Products/prices centrally governed.

Phase 3.4: Page Layouts

Order (highest impact for reps)

- Information: Account, Effective Date, Status, Channel__c, Applied_Voucher__c, Line_Net_Total__c.
- Related Lists: Order Products primary; show related Loyalty Transactions via Account related list or a related component.

- Actions: “Add Products” visible in Draft; “Activate” visible after lines are added and any required validation is met.

Account (manager/rep)

- Highlights: Loyalty_Tier__c, Loyalty_Points__c.
- Related Lists: Orders, Loyalty Transactions, Vouchers.
- Quick Actions: Create Voucher (if permitted), Log Loyalty Transaction (admin only).

Product2

- Fields up front: ProductCode, Category__c, Stock_Quantity__c, Low_Stock_Alert_Level__c.
- Related Lists: Price Book Entries to audit active pricing.

Benefit_Voucher__c

- Fields: Type__c, Discount_Percent__c, Status__c, Dates, Account__c.
- Validation: Optional rule to prevent multiple active vouchers per customer if required by policy.

Loyalty_Transaction__c

- Fields: Type__c, Points__c, Related_Order__c.
- UI guidance: Help text clarifying positive (earn) vs negative (redeem) values.

Custom Objects Designed for SmartShop CRM

1. Loyalty_Transaction__c
 - Purpose: Ledger of loyalty activity (earn/redeem/correction) for each customer.
 - Outcome: Transparent, auditable points history and easy rollups for balances.
